 Saidali A

Objective

To work in a challenging and growth-oriented environment where I can apply my skills, gain experience, and contribute effectively to the organization.

Education

- TKM College Of Engineering, Kollam** 2025-27
M-Tech (Pursuing)
80%
- College of Engineering Perumon, Kollam** 2024-25
B-Tech
71%
- Govt. HSS Vellamanal Mayyanad, Kollam** 2019-21
Higher Secondary Education (12th)
99%
- MKLM HSS Kannanalloor, Kollam** 2018-19
SSLC
95%

Skills

- Programming Languages: C,Python
- Web Development: HTML,CSS, JavaScript
- Technologies & Tools:Vs code, pycharm, Google colab, Unity (AR/VR Development), AI
- Soft Skills: Problem-Solving, Analytical Thinking, Classroom Management
- Framework:Django, Matplotlib, OpenCv, Scikit-learn

Publications

- IEEE Publication: CLIP-Based Intelligent Waste Sorter: A Multimodal Framework for Zero-Shot, Few-Shot, and Unsupervised Waste Classification (2026)**
Proposed a CLIP-based multimodal framework for intelligent waste classification using Zero-Shot, Few-Shot, and Unsupervised learning for automated waste sorting.

Experience

- C-DIT Thiruvananthapuram, Kerala** 03-06-2026 - 02-08-2026
Intern
Assisting in the development of immersive AR/VR applications and interactive experiences.

Projects

- Context-Aware AR Museum Application**
Developed an AR application where NFC tags trigger corresponding 3D models dynamically. Enabled user interaction features such as rotation and zoom AR technologies. Ai Integrated context-aware descriptions, allowing the system to display relevant information about each objects and enhancing user engagement and learning experience.

- **Interactive Multimedia Kiosk System**
Designed and developed a real-time interactive multimedia solution integrating ESP32-based touch sensors with a Python application for sensor-triggered video playback, automated content management, and seamless user engagement in digital kiosk and exhibition environments.
- **VR Seven Wonders Hub: An Immersive Virtual Tourism Platform.**
Developed a VR-based virtual tourism application in Unity, enabling users to visit and experience the Seven Wonders of the World through immersive 360° videos and interactive virtual environments.
- **Employee Attrition Prediction System using Machine Learning**
Created a machine learning model to predict employee attrition using data preprocessing and model training techniques, improving decision-making insights.
- **CLIP-Based Intelligent Waste Sorter: A Multimodal Framework for Zero-Shot, Few-Shot, and Unsupervised Waste Classification**
Developed a CLIP-based multimodal waste classification system that combines Zero-Shot, Few-Shot, and Unsupervised learning approaches for automated waste sorting.
- **Blockchain-Based Proof-of-Product Verification System for Authentic Review Validation in E-Commerce**
Designed a blockchain-enabled review validation framework using Flask, SQLite, Solidity and Polygon blockchain to prevent fake e-commerce reviews.

Achievements & Awards

- NPTEL – Foundation for Virtual and Augmented Reality Systems
- NPTEL – Advanced Computer Networks
- NPTEL – Introduction to Operating Systems
